- Aircraft design and construction
- Flight operations
- Maintenance and inspection
- Emergency procedures

Aircraft Design and Construction

The design and construction of seaplanes, skiplanes, and float/ski-equipped helicopters must meet specific requirements in order to ensure

safe operation. These requirements include:

- The aircraft must be able to float or ski on water or snow.
- The aircraft must be able to take off and land on water or snow.
- The aircraft must be able to withstand the forces of waves and currents.
- The aircraft must be equipped with appropriate safety equipment, such as life jackets and fire extinguishers.

Flight Operations

The operation of seaplanes, skiplanes, and float/ski-equipped helicopters requires specialized knowledge and skills. These aircraft must be operated in accordance with the following guidelines:

- The pilot must be properly trained and qualified to operate the aircraft.
- The aircraft must be operated in accordance with the manufacturer's specifications.
- The aircraft must be operated in a safe and responsible manner.

Maintenance and Inspection

Seaplanes, skiplanes, and float/ski-equipped helicopters require regular maintenance and inspection in order to ensure safe operation. This maintenance and inspection must be performed by qualified personnel in accordance with the manufacturer's specifications.

Emergency Procedures

In the event of an emergency, the pilot of a seaplane, skiplane, or float/ski-equipped helicopter must be prepared to take appropriate action. These actions may include:

- Landing the aircraft on water or snow.
- Evacuating the aircraft.
- Calling for help.

This handbook is a valuable resource for anyone who operates or plans to operate a seaplane, skiplane, or float/ski-equipped helicopter. By following the guidance in this handbook, you can help to ensure the safe operation of these aircraft.
